**What's in the Box?**

1. DCU 305 Engine Controller
2. RK-66 Interface Module
3. Two connector cables
4. Fastening material
5. Quick Installation Guide

**User Interface Basics**

**Instrument Page**
Bar graph gauges and Status bar.

**Start Engine**
Press and hold the Start Button for manual start.

**Stop Engine**
Briefly hold the Stop Button until activated - indicated by the LED.

**Alarm List**
Press Alarm List Button:
- No alarm
- Acknowledged
- Unacknowledged

**Menu/Enter/Exit**
Three Modes indicated by LEDs.

**Caution!**
Handle with care when opening the bag and installing the units.

**More Information**
For the latest updated information, please contact your local distributor or visit the Marine Plus 300 section at the Auto-Maskin website:  [http://www.auto-maskin.com](http://www.auto-maskin.com)

<td>1</td>
<td>2</td>
</tr>
</tbody>
</table>

**Responsibilities**

It is the sole responsibility of the installer to ensure that the installation work is carried out in a satisfactory manner and meet all applicable rules and regulations.

**Installation**

1. Wire all external connections to the RK-66 Interface Module:
   - Power
   - Switch inputs
   - Magnetic pickup(s)
   - Analogue inputs
   - Relays
   - Remote controls

2. Determine the DIP switch 1-4 settings behind the RK-66 rubber lid for power and noise reduction options.

3. Install the Engine Controller in the cut-out using the submitted fastening material and tighten sufficiently.

4. Connect the cables P1 and P2 between the Main unit and the RK-66 module.

For further details and information, please see the **Installation Manual**.

**Configuration**

The DCU must be configured using a Windows PC with the Rudolf Configuration Software for DCU 305 R3 installed. This software can be downloaded from the Auto-Maskin Website:

The PC and the DCU (P3) connects together using an RS-232/Rudolf Cable. If no COM port is available at the PC, then a USB-adapter must be used. Note that these cables are not included in this kit.

After a successful connection, every single I/O and information necessary for your setup must be configured in the different Rudolf Configuration Software sections:

- Main
- Switch inputs
- Analogue inputs
- Standby Operation
- Prelube
- Speed Sensor
- Speed Relays
- Battery
- Information
- Relays
- Service
- SPN Alarms (optional)

Finally, at the rear side of the Engine Controller, set the Backup System Settings as advised by the Configuration software.

For further details and information, please see the **Rudolf Configuration Tool Manual**.

**Note**

Auto-Maskin continuously upgrades its products and reserves the right to make changes and improvements without prior notice.

**Additional Documentation**

Please visit the Auto-Maskin website [http://www.auto-maskin.com](http://www.auto-maskin.com) for additional documentation about the product.
