

Marine Broadcast

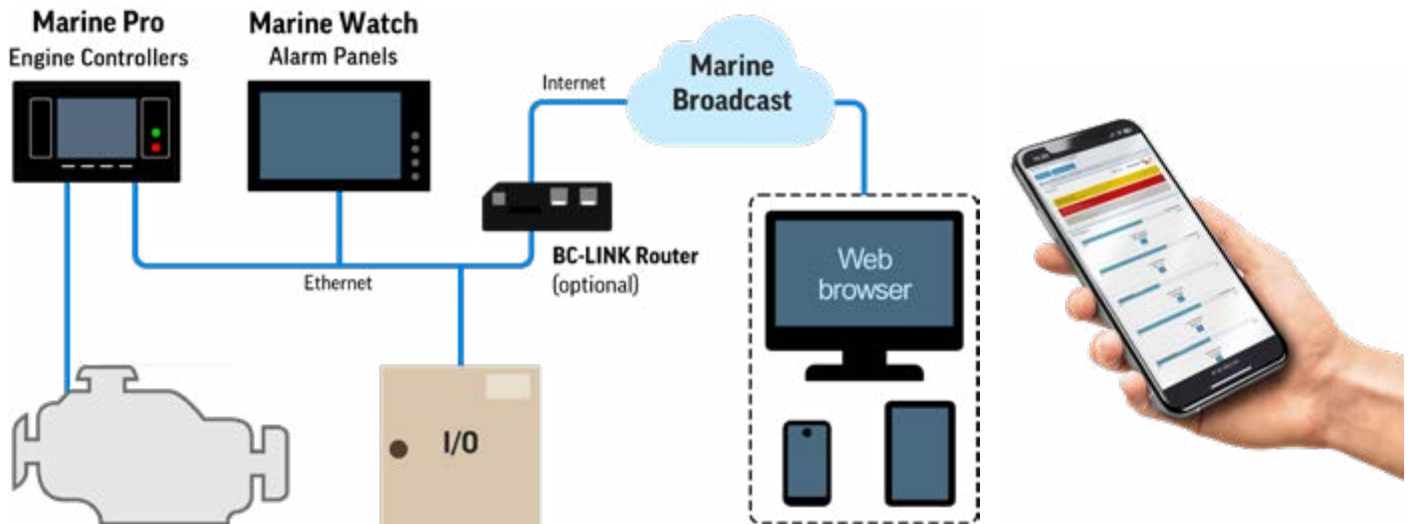

Cloud-based Remote Monitoring

Cloud-based vessel remote monitoring

Marine Broadcast is a cloud-based service for monitoring any vessel equipped with a Marine Watch alarm panel or a Marine Pro 400 or 200 Series engine controller.

- Real-time remote monitoring of vessels or entire fleets
- Web-based, cell phones and tablets supported
- Analog instruments and instant trending
- Email and SMS notifications
- Live data graphs and historical data export
- Free entry level

Example of use

Secure cloud-based service

No special hardware or software is required. A standard computer, Chromebook, Android or iPhone device running a standard web browser can be used to access the status of any vessel. The Marine Broadcast cloud-based service provides trusted users with secure access to the real-time status of the vessel(s) they are authorized to monitor.

Preinstalled in the panel

Support for the Marine Broadcast service is preinstalled in all new Marine Watch alarm panels and Marine Pro 400 and 200 Series engine controllers, and is also included in firmware upgrades for existing units.

Email and SMS alerts

Receive real-time alerts via email or SMS based on alarm signals or communication loss events.

Live data graphs, trending and logging

View live data graphs with trending capabilities and download historical data for analysis and documentation.

Quick setup

Auto-Maskin sets up the company account, including the administrator account and vessel registrations. The administrator can then create additional users and assign access to the status and data of the company's vessels.

To register for the Marine Broadcast service, visit <https://www.auto-maskin.com/prod/broadcast>.

BC-LINK Router

For vessels without an existing internet connection, the BC-LINK Router provides seamless connectivity between onboard engines and vessel systems, and the internet via 2G, 3G, and 4G networks.

By securely transmitting vessel data to the Marine Broadcast cloud platform, the solution enables efficient remote monitoring of vessel health, performance, and operational status from shore.

Free entry level

Entry-level functionality of the Marine Broadcast service is available free of charge to all owners of a Marine Watch alarm panel or a Marine Pro 400 or 200 Series engine controller.
